

**YOU DREAM**

**WE DELIVER**

• Rock features

• Theme facades

• Theme structures

• Sculptures

The casino industry has evolved from one-dimensional gambling facilities to become multi-dimensional “entertainment destinations.” COST is proud to be an integral part of this exciting industry. The theme and specialty finishes developed by our artisans have become the focal points of many of the most recognized casinos in the United States. Interior and exterior specialty features located in highly visible areas such as Porte Cocheres, lobbies, restaurants, lounges, gift shops, and on gaming floors, differentiate one gaming facility from another in this competitive industry. To create this differentiation, COST works in all types of materials, fabrication techniques, and a variety of construction disciplines to provide our clients with a single-source solution for their theme and specialty construction needs.

COST has not only worked on Las Vegas projects, but we also have been extensively involved with Native American gaming, constructing more than 30 tribal projects since 1993. As an active member of NIGA, WIGA, AICC of WI, COST realizes that many tribal properties are more than casinos. Our consultants work closely with tribes and do the necessary research to incorporate unique aspects of their heritage into each design. All COST projects are the result of close collaboration between owners, developers, and design and construction teams. Our typical scope involves shop drawings, renderings and scale models that all act as “checks and balances” to ensure the owner’s ideas and vision are reflected in the fabrication and construction phases.

• Sculptures

# FROM CONCEPT TO COMPLETION...

## PROJECT DESIGNERS

COST project designers use the latest in AutoCAD software to produce shop drawings and details for the projects we undertake. We work closely with architects, interior designers, landscape professionals, contractors and owners to deliver their design intent. We create interesting, immersive themes by imaginatively blending rockwork, water features, theme facades, scenery and decorative elements to deliver a customer experience second to none. Our team can also design your project using “green” techniques and materials within the features we build.

## CONSULTATION & MODELS

Our staff members can offer consultation services for any theme construction project. We can advise on material usage and constructability for simulated rock, waterfalls, theme facades, scenery, artificial trees and sculptural elements. During the pre-construction phase for most of our projects, we build a highly detailed three-dimensional model to use for review and approval prior to beginning the fabrication and construction phases.

## FABRICATION

Unlike many theme construction firms, COST has the capacity to prefabricate critical components within our 140,000-square-foot plant. We utilize shotcrete, GFRC, FRP, epoxies, wood, urethanes, acrylic and other materials to construct our scenes and sets. The fabrication plant also includes three steel shops for erecting steel armatures, which expedites projects and saves money when timelines are constrained. Smaller thematic elements and sculptures can be manufactured completely within our plant and shipped to the facility for immediate installation.

## CONSTRUCTION

Specialty construction requires knowledgeable personnel to complete projects on time and within budget. Our artisans, skilled in constructing environments of all kinds, bring to life the ideas developed through design and modeling. We promote a safe work environment and employ a full-time safety engineer to ensure compliance with COST's OSHA Safety Program and to monitor our HAZCOM and environmental guidelines. As an industry-leading specialty construction firm, our experience ensures clients a smooth transition from concept to completion.
