

YOU DREAM

WE DELIVER

• *Water features*

• *Theme facades*

• *Specialty finishes*

• *Sculptures*

COST offers a complete scope of water feature services: consulting, mechanical design, engineering, scale models and construction of both naturalistic and architectural features. More than 50 years of specialty construction expertise enables us to work within a variety of complex materials such as natural and faux stone, concrete, FRP, decorative metals and glass. Combinations of many of the above materials deliver the very best in water feature aesthetics.

COST's turnkey packages can also include pool/ponds, liner placement, lighting, mechanical and filtration installation. Design/build arrangements also are available through our firm, allowing owners to rest easy that their project will meet their design expectations and maintain the respective budget.

Let our dedicated staff of designers, project managers, construction personnel and artisans transform your ideas into a signature feature at your facility. From waterfalls, fountains, rain walls and interactive water effects to any other water feature style you dream, COST will deliver.

FROM CONCEPT TO COMPLETION...

PROJECT DESIGNERS

COST project designers use the latest in AutoCAD software to develop design documents from concepts to working drawings. We work closely with architects, designers, builders, developers, owners and landscape professionals to deliver the design intent. We create the ultimate in water feature attractions by imaginatively merging pools, fountains, sculptures, natural rock and simulated rock. Our design team can also recommend high-efficiency pumps and other “green” alternatives throughout the design process.

CONSULTATION & MODELS

COST offers consultation services throughout the entire project or for a specific phase of the project. We can advise on water feature design and construction, mechanical requirements, material usage and methodology. During the pre-construction phase for most of our projects, we build a highly detailed three-dimensional model to use for review and approval prior to beginning the fabrication and construction phases.

FABRICATION

Unlike many specialty construction firms, COST has the capacity to prefabricate critical pieces of projects within our 140,000-square-foot plant. Our steel shops allow us to fabricate steelwork for on-site assembly while our mechanical shop constructs vault systems, complete with pumps, filters and chemical feeders. Developing these pieces in our plant expedites projects and saves money when timelines are constrained. COST’s specialized shops also work in GFRC, FRP, epoxies, acrylic, and decorative metals.

CONSTRUCTION

Water feature construction requires knowledgeable personnel to complete projects on time and within budget. Our artisans, skilled in water feature construction, bring to life the ideas developed through design and modeling. We promote a safe work environment and employ a full-time safety engineer to ensure compliance with COST’s OSHA Safety Program and to monitor our HAZCOM and environmental guidelines. As an industry-leading water feature contractor, our experience ensures clients a smooth transition from concept to completion.
